PERSONAL PROJECTS

[HTTPS://GITHUB.COM/BKLO94](https://github.com/BKLO94)

Multithreaded Job Mapping App: C, Python, PostgreSQL, HTML/CSS, Javascript

- Utilized the BeautifulSoup Python module to parse through webpages to find novels that I wanted to keep track of.
- The app allows the user to search,store, and update selected novels in a SQLite database.
- Once a new novel is found or updated, the user is sent an email through SMTP using IMAP.

Novel Tracking App: Python, SQLite3, Bash

- Utilized the BeautifulSoup Python module to parse through webpages to find novels that I wanted to keep track of.
- The app allows the user to search,store, and update selected novels in a SQLite database.
- Once a new novel is found or updated, the user is sent an email through SMTP using IMAP.

/r/Buildapcsales Bot: Python, SQLite3

- Created the bot to stay up to date with API use and how Python parses through webpages.
- Used the PRAW (Python Reddit API Wrapper) to search for relevant posts and send a message to myself about a new post.
- The script ran on Heroku and updated the database every 15 minutes.
